

Mobilizing mass action through mobile devices: Challenges and opportunities for science, policy and governance

Linda See
Research Scholar, IIASA

Paul Chatterton
Director REDD+ Landscapes, WWF International

IIASA Systems Analysis Conference
Laxenburg, 13 Nov 2015

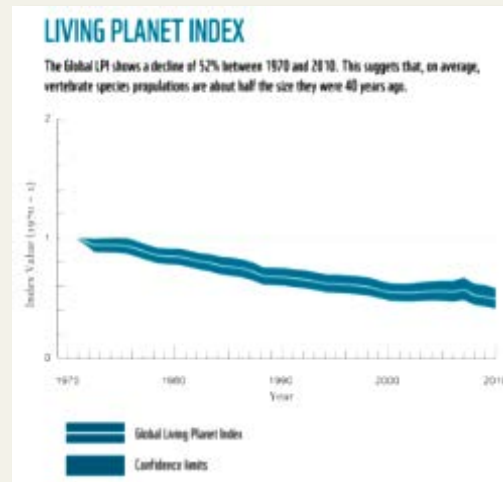

Outline

- 1. Global challenges and opportunities**
- 2. Theory and practice of citizen science**
- 3. Finding solutions within a new epistemology**

Our Challenges

Consuming beyond our means

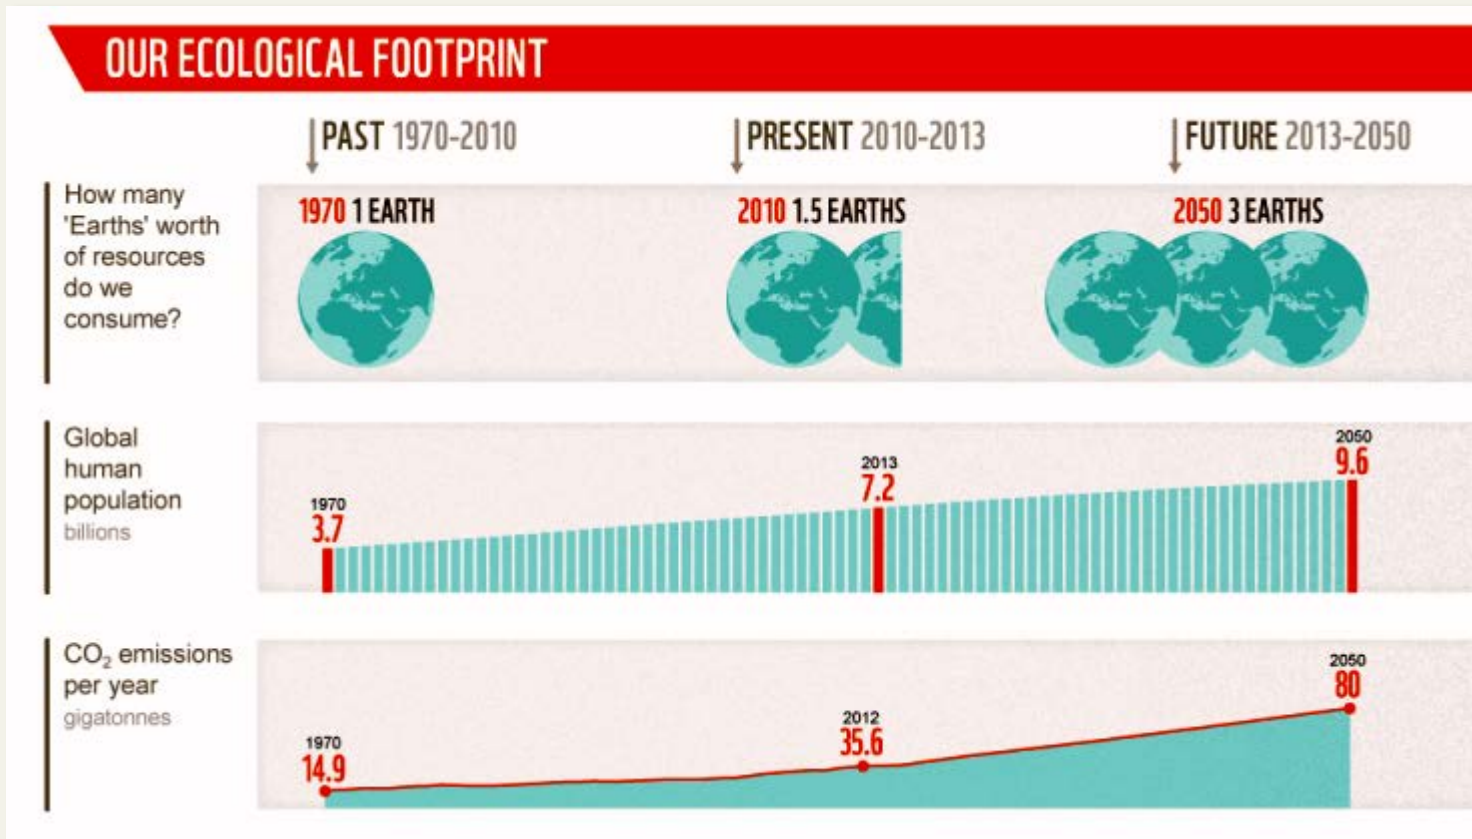

Biodiversity loss

Climate change

Living as if we owned an extra planet or two

We need to produce more with less

By 2050 ...

global
incomes will
almost
triple

70% more food
production will be needed

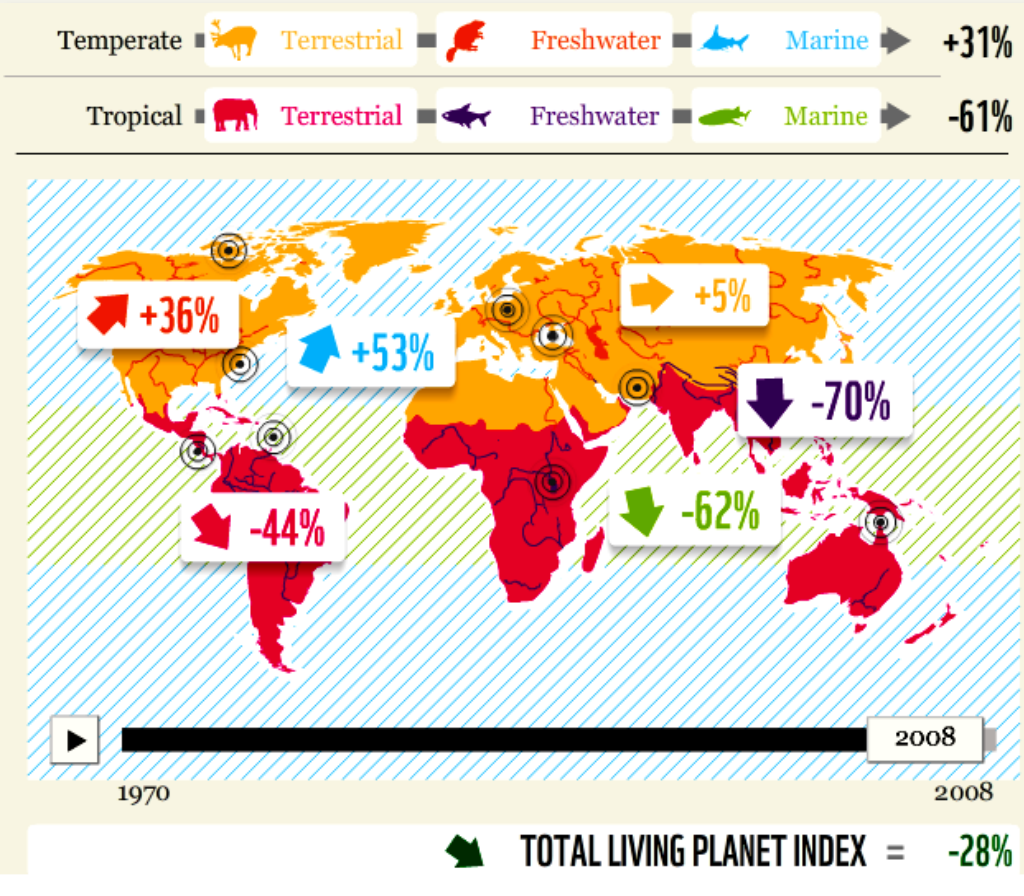

While climate change dries
river basins and increases
the pressure on crop yields.

3.5
billion people in water-
stressed river basins by 2025

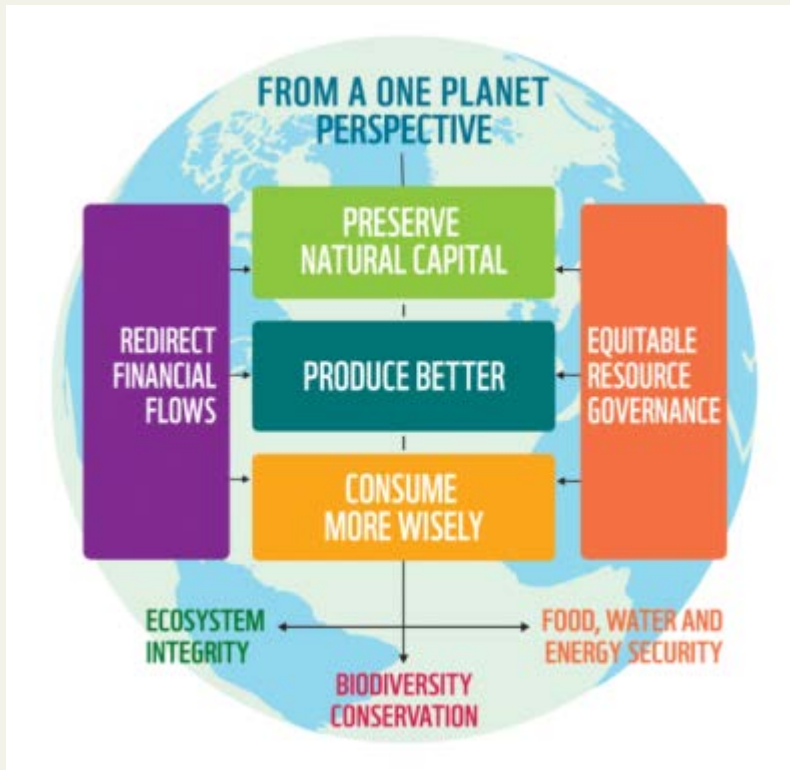

Half of all higher animal species lost since 1970s

To address these problems we need ...

a systems approach ...

at scale

To meet the urgency of the modern environmental challenge, we need solutions that can deliver at scales of at least:

million

- hectares of habitat protected
- tonnes commodities certified as sustainable
- tCO₂e emissions reduced
- people informed and active

1

\$ billion

financial flow influenced

We have some solutions

PROTECTED AREAS

Amazon Region Protected Area Program, Brazil

Results: 52 M ha, 1.2 B CO₂e ↓, \$80 M finance

REDD+ / GREEN DEVELOPMENT

Mai Ndombe Emission Reduction Program, DRC

Planned Results: 13 M ha, 29 M CO₂e ↓, \$176 M

MARKET TRANSFORMATION

Certification Schemes (FSC, RSPO etc)

Results (FSC): 183 M ha of forest certified

CATCHMENT MANAGEMENT

Danube River Basin Commission

Results: A cleaner, swimmable river

And there is no shortage of money

New financing for climate and sustainable development

Public climate finance (REDD+ / Adaptation, Land degradation neutrality)

\$7-9

billion allocated since 2007.

\$20-30

billion potential from Paris outcome 2015

Private finance (e.g. Green Bonds, banking standards, ESG)

\$37

billion in green bond issuances in 2014 and accelerating

Impact investing / entrepreneurs

\$11

billion estimated value in 2014

Impact entrepreneurialism has the potential to produce local solutions faster and more sustainably.

But where is technology among these solutions?

What if we could harness the energy of a billion people for the whole year rather than just an hour?

**Can mobile technology help transform
how we live on this planet?**

Mobile phones are a truly disruptive technology

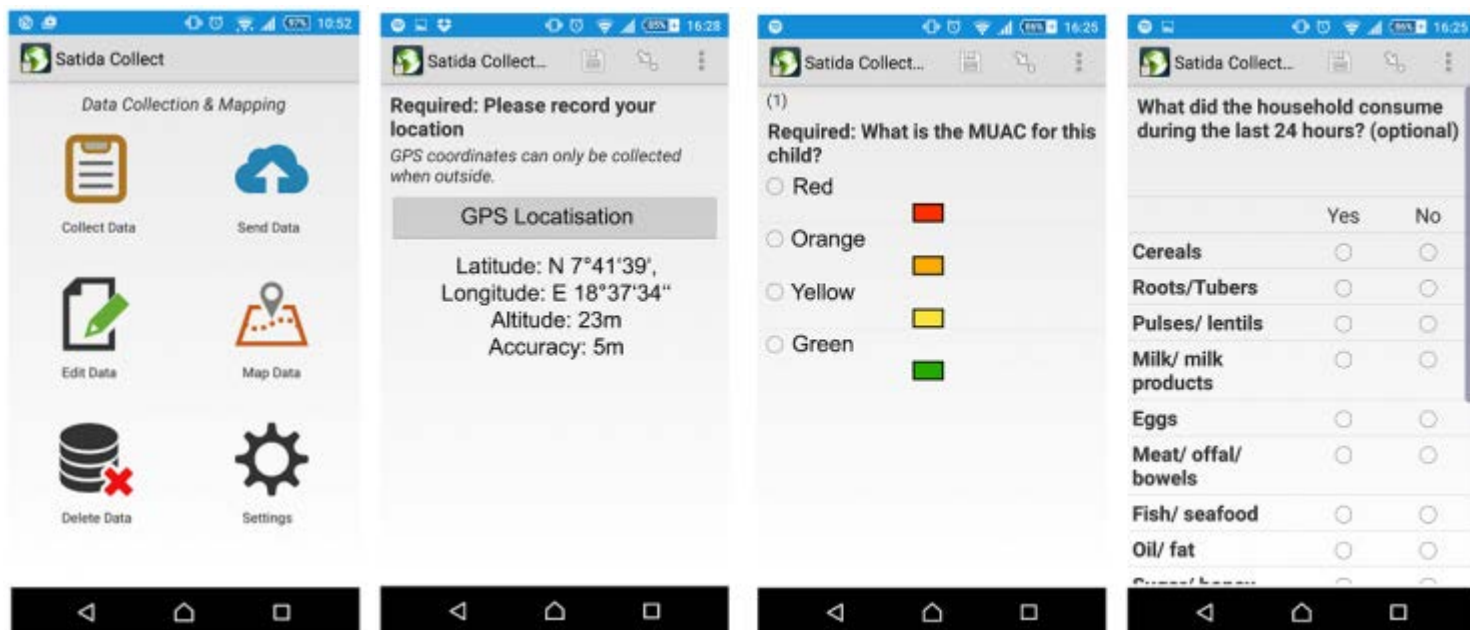

What is the potential when we combine citizen science and mobile tech?

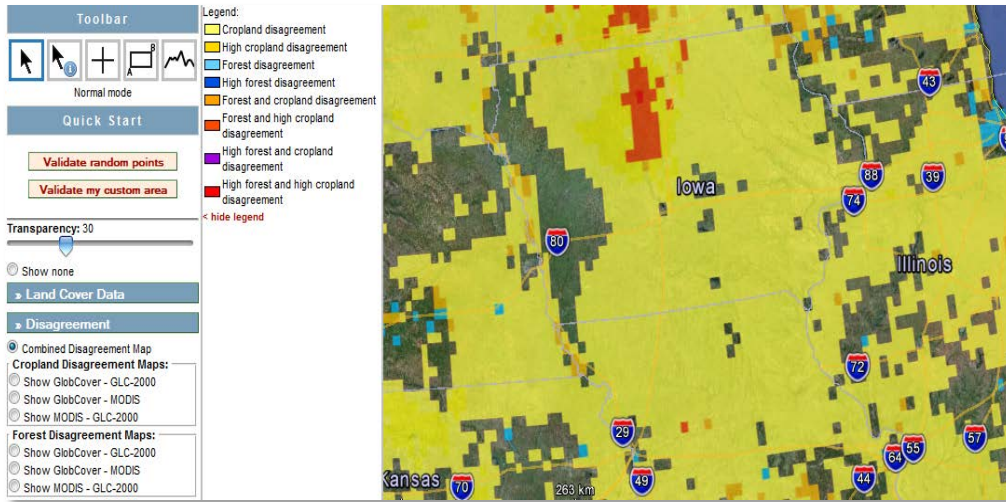

iSPEX – simple attachment to iPhones to measure aerosol optical thickness (size, concentration)

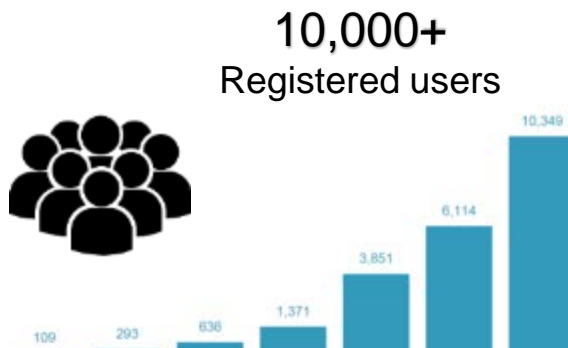

Satida Collect – app to gather household data on the ground and visualize drought info

Enenkel, M., See, L., Karner, M., Alvarez, M., Rogenhofer, E., Baraldes, C., Lanusse, C. and Salse, N. In press. Food security monitoring via mobile data collection and remote sensing: Results from the Central African Republic. *PLOS ONE*.

Maybe ↓

Menu

Moabi DRC is an independent initiative to collaboratively monitor natural resource use in the Democratic Republic of the Congo.

75% of world land is unregistered

Two services in one app

1 Land Tenure

Many countries are recognising the economic value of clarifying land tenure.

2 Traceability

Major consumer brands increasingly need to prove sustainability in supply chains

A mobile platform that allows farmers and communities to affordably map their land and begin to unlock its value.

LANDMAPP

Village and
area maps

Muyono (Plot 1 of 1)

Location
 District: Ciarif
 Sub-district: Purwokerto
 Village: Purwokerto
 Sub-village: Purwokerto
 Address: Jl. Raya Purwokerto
 Phone: 0812-3456789

Farmer Information
 Name: Muyono
 Gender: Male
 Age: 45
 Education: High School
 Occupation: Almond Farmer
 Cultivation Area: 2.5 Hectares
 Main Crop: Almonds
 Other Crops: Corn, Soybeans

Product Details
 Crop: Almonds
 Variety: Local
 Harvesting Period: Oct - Dec
 Production Volume: 500 kg/year
 Quality: High

Transaction Dashboard

Transaction ID	Buyer Name	Product Name	Quantity	Price	Total Value	Status
TRN001	Buyer A	Almonds	100 kg	5000	500000	Completed
TRN002	Buyer B	Almonds	200 kg	4500	900000	In Progress
TRN003	Buyer C	Almonds	150 kg	6000	900000	Completed

Farmer Profile Summary

Government Certificate: Yes (Available)

Coordinates: 7.250000000, 104.250000000

Village: Purwokerto

Crop: Almonds

Contact: 0812-3456789

Land: 2.5 Hectares

Kahar (Plot 1 of 1)

Carit Gunung (Plot 1 of 1)

Sugiono (Plot 1 of 1)

Farmer Profiles Grid

A grid of four smaller farmer profile cards, each showing a farmer's photo, name, and basic location information.

Product Dashboard

A grid of eight product images showing almonds in various stages of processing and packaging, used for buyer selection.

Some Lessons from Mobile Citizen Science

- Think carefully about how best to **engage citizens** – media, feedback and dialogue, gamification, incentives (sometimes)
- **Design for scaling** – pilots, stress testing
- Focus on the **big problems and the big solutions**
- **Build with business** people from the start – they know about scale!
- Build **platforms** as well as products

And three questions to you

- **How can you engage citizens in helping to improve your science and policy making?**
- **Where can you combine your efforts with others and rethink for scale?**
- **Are you talking to business people, marketers and communicators to sell, systematise, fund and scale your science?**

The epistemological shift

The epistemological shift

The epistemological shift

“Had we but world enough, and time”

Recap: Questions to you

- **How can you engage citizens in helping to improve your science and policy making?**
- **Where can you combine your efforts with others and rethink for scale?**
- **Are you talking to business people, marketers and communicators to sell, systematise, fund and scale your science?**
