

First mission – towards a global harmonised in-situ data repository for forest biomass datasets validation

Dmitry Schepaschenko (IIASA);

Jerome Chave (Uni Toulouse – CNRS);

Oliver Phillips, Simon Lewis (Uni Leeds – ForestPlots);

Stuart Davies (SI-STRI – ForestGEO);

Plinio Sist, Bruno Herault (Cirad – TmFO);

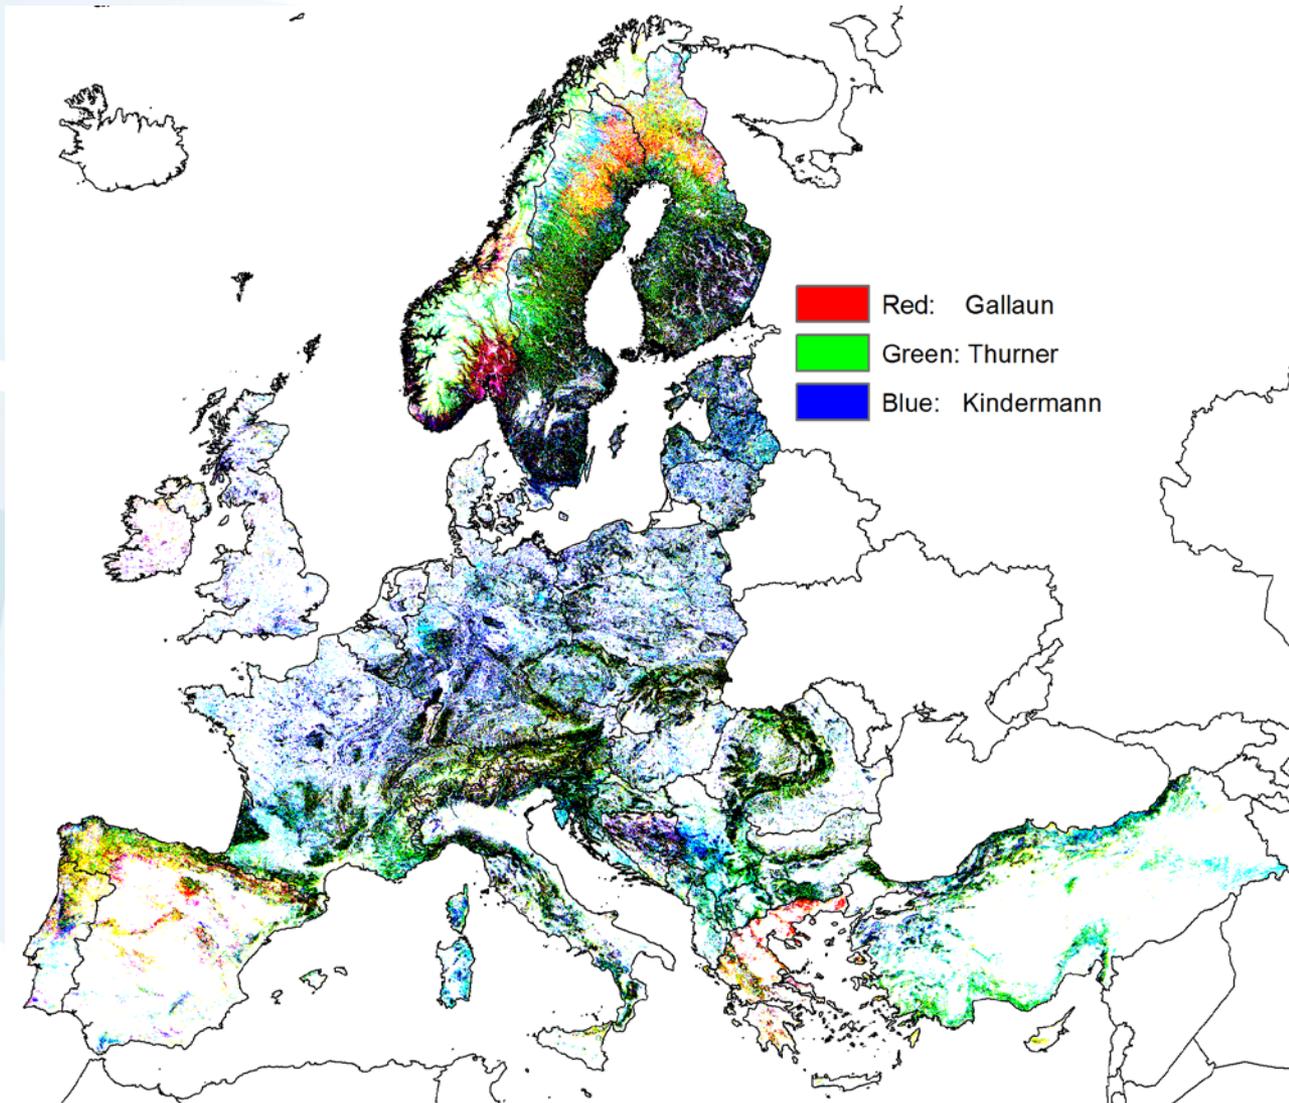

Maxime Réjou-Méchain (AMAP);

Klaus Scipal (ESA)

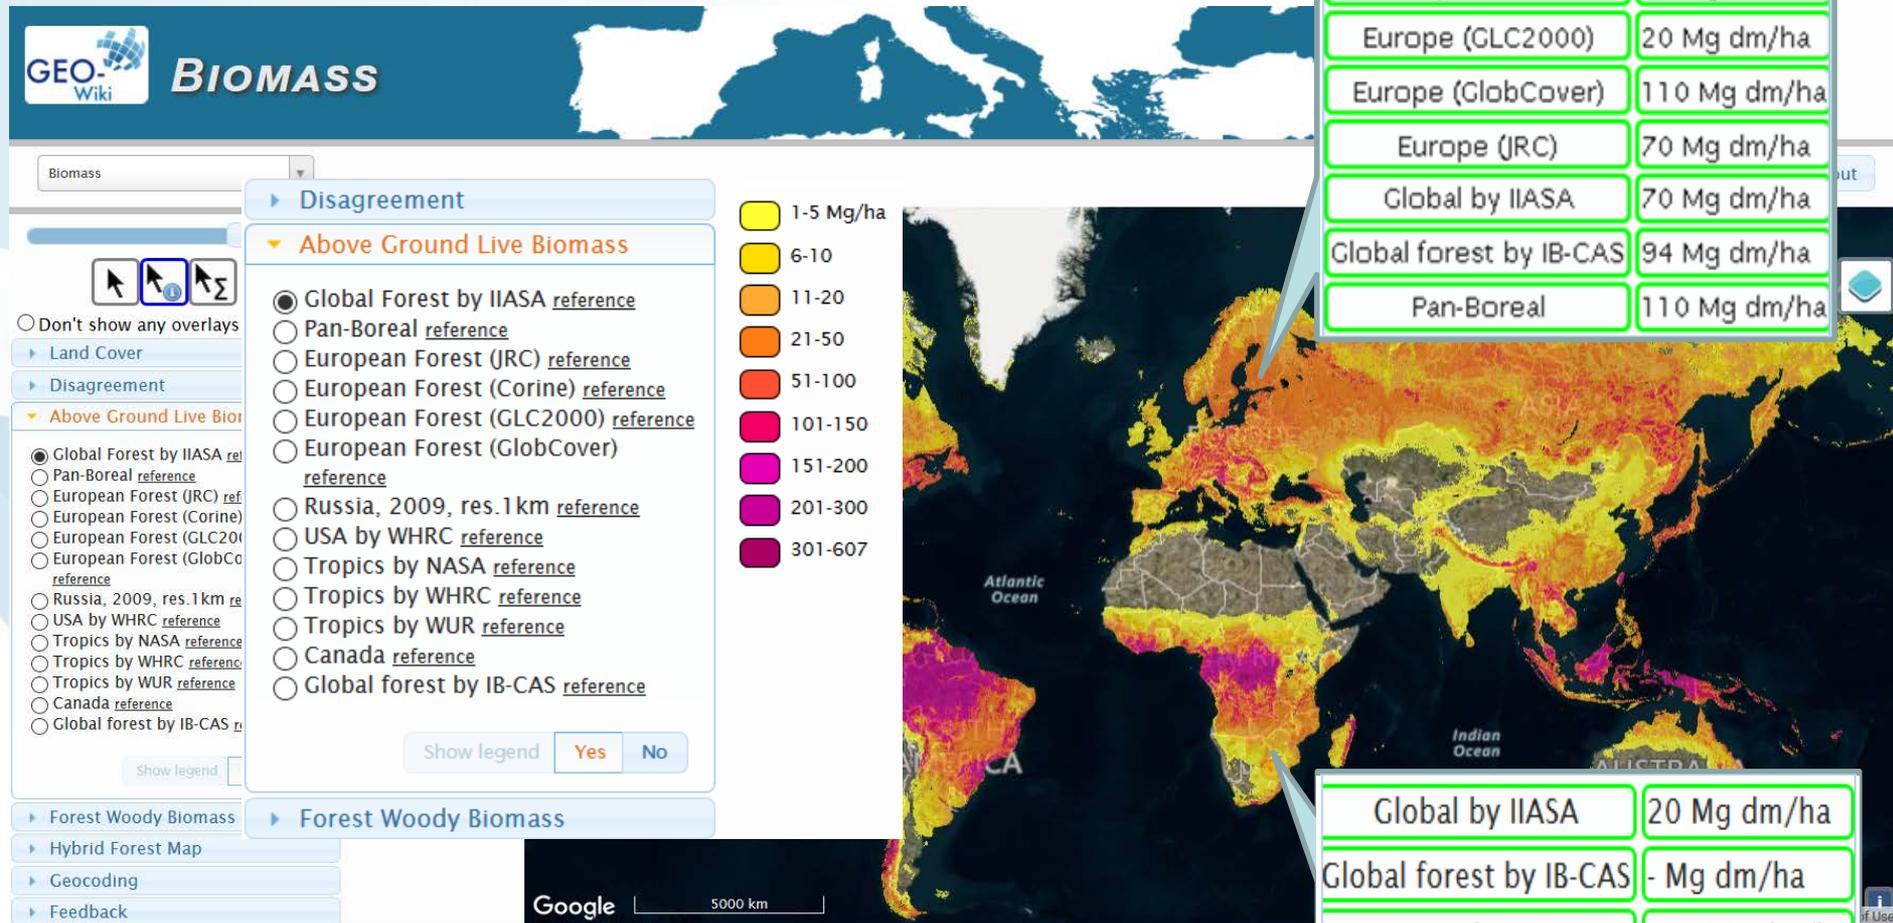

Comparison of three biomass maps for Europe:

White color – all map agree on low biomass,
black – all agree on high biomass

Biomass.Geo-Wiki.org

3 Spaceborne Missions to measure forest structure

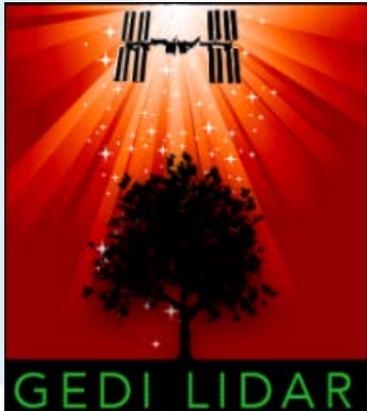

Question:

1. Are we able to make best use of these missions?
2. Will users trust remote sensing products?

These missions will deliver measurements of

- forest height
- forest biomass
- biomass change

The 1st Mission? Global Reference Data

BIOMASS

The good news: We don't need to start from scratch

RAINFOR (Red Amazonica de Inventarios Forestales)
500 biomass & dynamics plots

AfriTRON (African Tropical Forest Observation Network)
> 250 biomass plots

CTFS-ForestGEO
61 large dynamic plots,
ca. 30 tropical

TmFO (Tropical managed Forest Observatory)
ca. 490 biomass plots

These networks have a long history and experience building on a network of cooperating partners and mutual trust

IIASA network: Forest Observatories Partnership

The Background of FOS

(Forest-Observation-System.net)

- Forest-Observation-System.net (FOS) is a “Cyberinfrastructure” to collect and disseminate ground data.
- FOS aims at building an interface between well established, existing ecological networks and the EO community.
- FOS focus is on high quality datasets that are fit for the EO purpose (e.g. geocoded data, plots with a history, etc.) based on traceable and documented requirements.
- FOS collects, but does not distribute tree level data. FOS only distributes aggregated plot level data
- FOS data is available free & open in a unified format.

FOS schedule

Phase 1 (2016-2017) – Demonstration

- Set up the infrastructure & web portal
- Establish a collaboration with RAINFOR, AfriTRON and CTFS-ForestGEO
- Run the web portal in a Demo mode including first data

Phase 2 (2018 - 2021) – Implementation

- Identify and establish collaboration with other networks (TmFO, AusCover and others).
- Interface upgrade (search, download, etc.)
- Expand to host airborne LiDAR-based biomass maps
- Journal articles – contributor recognition and acknowledgement

FOS: <http://forest-observation-system.net>

The screenshot shows the Forest Observation System (FOS) website interface. At the top, there is a navigation bar with the logo and the text "FOREST OBSERVATION SYSTEM". To the right of the logo are menu items: "MAP", "ABOUT", "RESOURCES", and "CONTACTS". Below the navigation bar is a world map with red dots indicating the locations of forest plots. The map is labeled with various countries and oceans. To the right of the map is a "PLOT INFORMATION" panel for plot "RK-10 (1)".

PLOT INFORMATION

RK-10 (1)

Russia

Network: IIASA, IF Link

PIs: V.V. Ivanov, L. V. Mukhortova, E. F. Vedrova

Established: 2007

Plot area: 0.25 ha

Census: 2007

Measurements:
AGB Local HD : 73.93 t/ha
H Lorey Local: 10.30 m
Min DBH : 5 cm
Wood Density : 0.50 t/m³

Taxonomic Identifications:
Pinus sylvestris: 96 % (2736)
Larix gmelinii: 2 % (86)
Pinus sibirica: 2 % (85)

Biomass maps legend:

- 1 - 20 Mg dm / ha
- 21 - 50

DOWNLOAD DATA

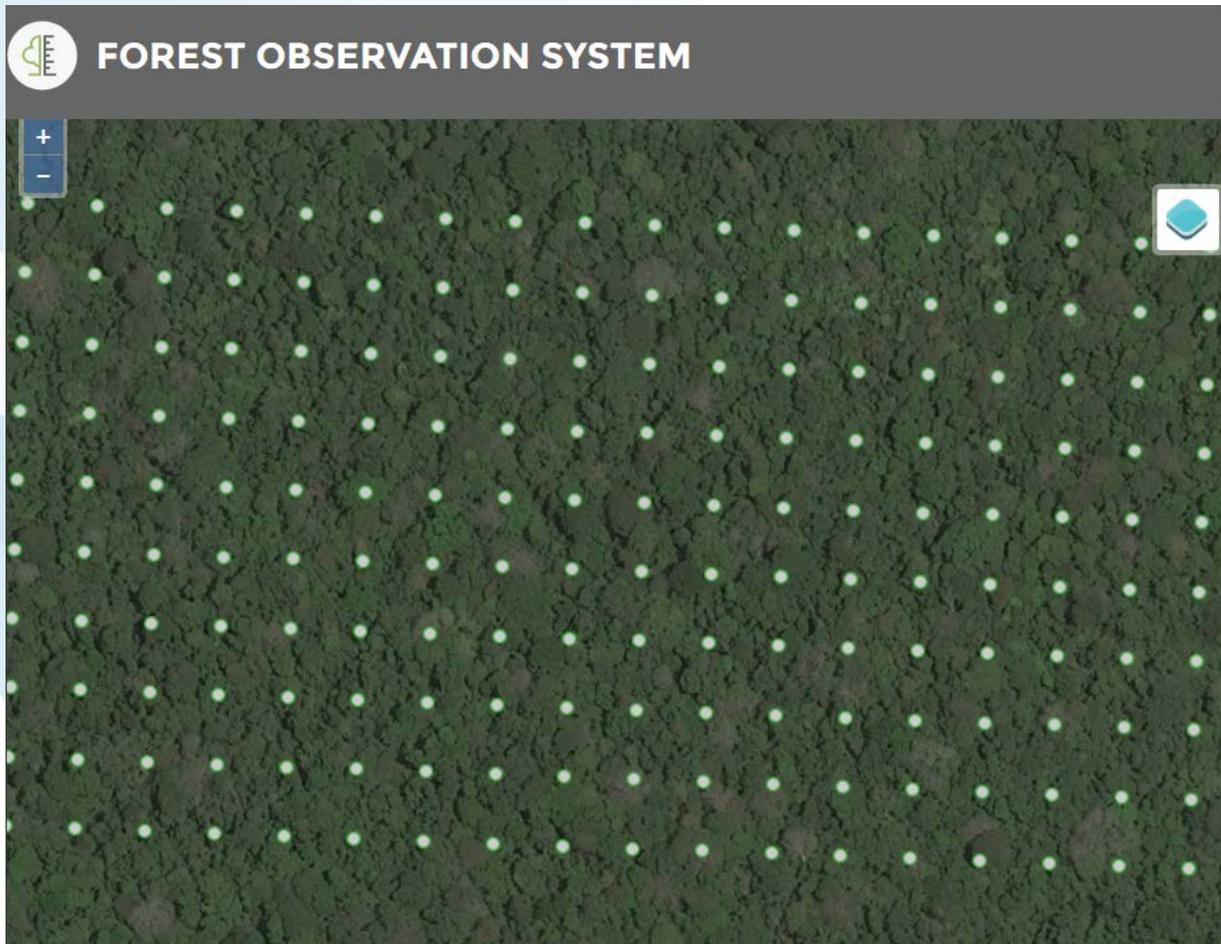

FOS *in situ* data

- What are we looking for:
 - Data from permanent plots with the min size of 0.25 ha (preferably 1 ha or large)
 - Every tree (over 10 cm dbh) got species identification and DBH is measured
- Output data at plot level:
 - General characteristics (relief, forest type, disturbances, tree species)
 - Canopy height (top, Lorey's)
 - Above ground live biomass (estimated by allometric model $AGB=f(\rho,D,H)$)

Distribution of sample plots by participation networks

Network	Number of plots	Number of sub-plots	Area, ha
AfriTRON	46	178	45
AusCover	4	4	3
CTFS-ForestGEO	2	300	75
IIASA	126	258	78
RAINFOR	52	288	72
T-Forces	3	12	3
TmFO	17	500	125
unaffiliated	24	105	27
Total	274	1645	428
